# Life *of a* Plant

Plants grow and reproduce in a repeating cycle that helps new plants develop from seeds

## Seed

A tiny package with a baby plant inside and stored food.

## Germination

The seed absorbs water and begins to sprout roots and a shoot.

## Seedling

A young plant grows its first leaves and starts making its own food.

## Flowering

The plant produces flowers to begin reproduction.

# Life *of a* Plant

Plants grow and reproduce in a repeating cycle that helps new plants develop from seeds

## Seed

A tiny package with a baby plant inside and stored food.

## Germination

The seed absorbs water and begins to sprout roots and a shoot.

## Seedling

A young plant grows its first leaves and starts making its own food.

## Flowering

The plant produces flowers to begin reproduction.

## Seed Production

After pollination, flowers form fruits with seeds that can grow into new plants.
